Change Log

Date	Change Description
2023-09-28	Initial release.

Introduction

This document provides information about all the log messages applicable to the FortiGate devices running FortiOS version 7.2.6 or higher. The logs are intended for administrators to use as reference for more information about a specific log entry and message generated by FortiOS.

This document also provides information about log fields when FortiOS sends log messages to remote syslog servers in Common Event Format (CEF). See [CEF support on page 61](#). It also describes how to enable extended logging. See [UTM extended logging on page 72](#).

Performance statistics are not logged to disk. Performance statistics can be received by a syslog server or by FortiAnalyzer.

Before you begin

Before you begin using this reference, read the following notes:

- Information in this document applies to all FortiGate units that are currently running FortiOS 7.2.6 or higher.
- Ensure that you have enabled logging for the FortiOS unit.
- Each log message is displayed in the *Log & Report* pane of the GUI. You can also download the RAW format from the *Log & Report* pane.
- Each log message is documented similar to how it appears in the RAW format.

This reference contains detailed information for each log type and subtype; however, this reference contains only information gathered at publication and, as a result, not every log message field contains detailed information.

What's new

This section identifies major changes in the Log Reference from version 7.2.0 and later. For more information about new features, please see the [FortiOS 7.2 New Features Guide](#).

Log types and subtypes

This section describes the log types, subtypes, and priority levels. It also describes the log field format.

Type

Each log entry contains a Type (type) or category field that indicates its log type and which log file stores the log entry.

Subtype

Each log entry contains a Sub Type (subtype) or subcategory field within a log type, based on the feature associated with the cause of the log entry.

For example:

- In event logs, some of the subtypes are compliance check, system, and user.
- In traffic logs, the subtypes are forward, local, multicast, and sniffer.

List of log types and subtypes

FortiGate devices can record the following types and subtypes of log entry information:

Type	Description	Subtype
traffic	Records traffic flow information, such as an HTTP/HTTPS request and its response, if any.	<ul style="list-style-type: none">• forward• local• multicast• sniffer• ztna

FortiOS priority levels

Each log entry contains a Level (level) field that indicates the estimated severity of the event that caused the log entry, such as `level=warning`, and therefore how high a priority it is likely to be. Level (level) associations with the descriptions below are not always uniform. They also may not correspond with your own definitions of how severe each event is. If you require notification when a specific event occurs, either configure SNMP traps or alert email by administrator-defined Severity Level (severity_level) or ID (logid), not by Level (level).

Level (0 is highest)	Name	Description
0	Emergency	The system is unusable or not responding.
1	Alert	Immediate action required. Used in security logs.
2	Critical	Functionality is affected.
3	Error	An error exists and functionality could be affected.
4	Warning	Functionality could be affected.
5	Notification	Information about normal events.
6	Information	General information about system operations. Used in event logs to record configuration changes.

For each location where the FortiGate device can store log files (disk, memory, Syslog or FortiAnalyzer), you can define a severity threshold. FortiOS stores all log messages equal to or exceeding the log severity level selected. For example, if you select Error, FortiOS will store log messages whose log severity level is Error, Critical, Alert, and Emergency.

Log field format

The following table describes the standard format in which each log type is described in this document. For documentation purposes, all log types and subtypes follow this generic table format to present the log entry information.

Log Field Name	Description	Data Type	Length
appact	The security action from app control	string	16

Log schema structure

This section describes the schema of the FortiOS log messages.

Log message fields

Each log message consists of several sections of fields. In the FortiOS GUI, you can view the logs in the *Log & Report* pane, which displays the formatted view. If you want to view logs in raw format, you must download the log and view it in a text editor.

Following is an example of a traffic log message in raw format:

```

Log ID numbers

The ID (logid) is a 10-digit field. It is a unique identifier for that specific log and includes the following information about the log entry.

Log ID number components	Description	Examples
Log Type	Represented by the first two digits of the log ID.	<ul style="list-style-type: none"> Traffic log IDs begin with "00". Event log IDs begin with "01".
Sub Type or Event Type	Represented by the second two digits of the log ID.	<ul style="list-style-type: none"> VPN log subtype is represented with "01" which belongs to the Event log type that is represented with "01". Therefore, all VPN related Event log IDs will begin with the 0101 log ID series.
Message ID	The last six digits of the log ID represent the message ID.	<ul style="list-style-type: none"> An administrator account always has the log ID 0000003401.

The logid field is a number assigned to all permutations of the same message. It classifies a log entry by the nature of the cause of the log message, such as administrator authentication failures or traffic. Other log messages that share the same cause will share the same logid.

CEF support

You can configure FortiOS 7.2.6 to send logs to remote syslog servers in Common Event Format (CEF) by using the `config log syslogd setting command`.

When CEF is enabled, FortiOS sends logs to syslog servers in CEF. This section describes how FortiOS logs support CEF.

You can view logs in CEF on remote syslog servers or FortiAnalyzer, but not in the FortiOS GUI.

FortiOS to CEF log field mapping guidelines

The following CEF format:

```
Date/Time host CEF:Version|Device Vendor|Device Product|Device Version|Signature
ID|Name|Severity| [Extension]
```

Displays as following in FortiOS logs with CEF enabled:

```
"MMM dd HH:mm:ss" "hostname of the fortigate"
CEF:0|Fortinet|Fortigate|version|logid|type:subtype +[eventtype] +[action] +
[status]|reversed level|...
```

The `SignatureId` field in FortiOS logs maps to the `logid` field in CEF and should be last 5 digits of `logid`.

The `Name` field in CEF uses the following formula:

```
type:subtype + [eventtype] + [action] + [status]
```

Following is an example of the header and one key-value pair for extension from the Event VPN log in CEF:

```
#Feb 12 10:31:04 syslog-800c CEF:0|Fortinet|Fortigate|v5.6.0|37127|event:vpn negotiate
success|3|FTNTFGTlogid=0101037127
```

The `type:subtype` field in FortiOS logs maps to the `cat` field in CEF.

Any fields in FortiOS logs that are unmatched to fields in CEF include the `FTNTFGT` prefix.

Quotes (") are removed from FortiOS logs to support CEF.

Forward slashes (/) in string values as well as the equal sign (=) and backward slashes (\) are escaped in FortiOS logs to support CEF.

CEF priority levels

Following are the CEF priority levels. They are opposite of FortiOS priority levels. See also [FortiOS priority levels on page 49](#).

Level (8 is highest)	Name	Description
8	Emergency	The system is unusable or not responding.
7	Alert	Immediate action required. Used in security logs.
6	Critical	Functionality is affected.
5	Error	An error exists and functionality could be affected.
4	Warning	Functionality could be affected.
3	Notification	Information about normal events.
2	Information	General information about system operations. Used in event logs to record configuration changes.
1	Debug	Debug information.

Examples of CEF support

This section includes examples of how the different types of log message support CEF.

UTM extended logging

FortiOS 6.0.0 and later supports extended logging for UTM log types to reliable Syslog servers over TCP. Extended logging adds HTTP header information to the `rawdata` field in UTM log types. You must enable extended logging before you can use the feature.

When extended logging is enabled, the following HTTP header information can be added to the `rawdata` field in UTM logs:

- Method
- X-Forwarded-For
- Request-Content-Type | Response-Content-Type
- Referer
- User-Agent

The full `rawdata` field of 20KB is only sent to reliable Syslog servers. Other logging devices, such as disk, FortiAnalyzer, and UDP Syslog servers, receive the information, but only keep a maximum of 2KB total log length, including the `rawdata` field, and discard the rest of the extended log information.

Enabling extended logging

You can enable extended logging for the following UTM profiles:

- antivirus
- application
- dlp
- ips
- waf
- webfilter

When you enable the `extended-log` option for UTM profiles, all HTTP header information for HTTP-deny traffic is logged.

When you enable the `web-extended-all-action-log-enable` option for webfilter profile, all HTTP header information for HTTP-allow traffic is logged.

Extended logging option in UTM profiles

The `extended-log` option has been added to all UTM profiles, for example:

```
config webfilter profile
    edit "test-webfilter"
        set extended-log enable
        set web-extended-all-action-log enable
    next
end
```

```
config antivirus profile
  edit "av-proxy-test"
    set extended-log enable
  next
end
config waf profile
  edit "test-waf"
    set extended-log enable
  next
end
```

Syslog server mode

The Syslog server mode changed to `udp`, `reliable`, and `legacy-reliable`. You must set the mode to `reliable` to support extended logging, for example:

```
config log syslogd setting
  set status enable
  set server "<ip address>"
  set mode reliable
  set facility local6
end
```

Example of an extended log

Following is an example extended log for a `utm` log type with a `webfilter` subtype for a reliable Syslog server. The `rawdata` field contains the extended log data.
